ForceShield to Reveal New IoT & OT Security Solutions at RSA Conference 2018

U.S. Debut of ForceShield's Dynamic Transformation Technology at Booth #5104

PALO ALTO, Calif., and TAIPEI—April 6, 2018—ForceShield, the IoT Defender, is bringing a new way to stop automated attacks that target the Internet of Things to the 2018 RSA Conference, April 16-20 at Moscone Center in San Francisco.

ForceShield enables safe operation in a connected environment with Dynamic Transformation Technology-based solutions that make systems defensible from emerging threats. With ForceShield, protection from hackers is proactive, allowing customers to protect valuable online assets from all types of unknown threats and botnet attacks, cost-effectively and efficiently.

Visitors to ForceShield's booth #5104, North Expo Hall, will experience how ForceShield's breakthrough dynamic security solutions protect the connected devices, networks, and clouds of the IoT, Industrial IoT (IIoT) and Operational Technology (OT). RSAC attendees will have a chance to win prizes in a drawing held each day at 3:00pm April 17-19 for the newest iPad Wi-Fi 32GB Gold.

About ForceShield

ForceShield, the IoT Defender, is the world's first dynamic security provider to the IoT industries. ForceShield creates a total protection shield over the IoT ecosystem to prevent automated attacks. ForceShield's cybersecurity solutions help device manufacturers, system integrators and OEM protect IoT devices, OT networks, and web and mobile application clouds. ForceShield is the trusted provider of IoT protection to the world's largest high-end home router vendor, and national governments. ForceShield's investors include Eight Roads (Fidelity International) and Sumitomo Corporation Equity Asia Limited (SCEA). ForceShield is privately held with offices in Palo Alto, and an R&D center in Asia. For more information, please visit: www.forceshield.com
